

Overview

- KYC is the identity verification platform on a blockchain.
- We provide KYC solution for all crypto exchanges, ICOs, banks, funds etc.

How it works?

Launch software for IOS and Android on November 1st

Every day 100k+ users open accounts on the services that need KYC. All of them need identity verification to be fast and easy

Verification process via KYC takes less than 30 min.

KYC is ERC20 and utility token (1KYC = 1USD)

ICO starts on December 1st

ICO max cap \$35 million

Token KYC

- Price for verification varies from \$10 to \$50 (depends on region).
Price includes Verifying Agent's costs from \$5 to \$25 (depends on region)
- Reward amount (50% of total price) can be shared between User and Tokenholder
- Reward sharing process is managed by Tokenholder only
- KYC token works as the sharing instrument and it means utility token
- Each token can be used in verification process once per month (not often)

Example:

Local full price \$10 = \$5 (agent's reward) + \$5 (Tokenholder reward)

If Tokenholder set his reward as \$2

\$2 (Tokenholder reward) + \$5 (agent's reward) = \$7 (referral full price)
