

Overview

- KYC is the identity verification platform on a blockchain.
- We provide KYC solution for all crypto exchanges, ICOs, banks, funds etc.

How it works?

Launch software for IOS and Android on November 1st

Every day 100k+ users open accounts on the services that need KYC. All of them need identity verification to be fast and easy

**Verification process via KYC
takes less than 30 min.**

KYC is ERC20 and utility token (1KYC = 1USD)

ICO starts on November 29th

ICO max cap \$35 million

Token KYC

- Price for verification varies from \$10 to \$50 (depends on region).
Price includes Verifying Agent's costs from \$5 to \$25 (depends on region)
- Reward amount (50% of total price) can be shared between User and Tokenholder
- Reward sharing process is managed by Tokenholder only
- KYC token works as the sharing instrument and it means utility token
- Each token can be used in verification process once per month (not often)

Example:

Local full price \$10 = \$5 (agent's reward) + \$5 (Tokenholder reward)

If Tokenholder set his reward as \$2

\$2 (Tokenholder reward) + \$5 (agent's reward) = \$7 (referral full price)
